

Apache

Apache Totem Light Box

- Easy poster change
- Double sided
- Freestanding
- Even light distribution
- Indoor use
- Easy to install / easy to handle
- Long life, high quality
- RAL colour finishes available
- Contemporary design

The Apache Illuminated Totem display, also known as a light column, is essentially a free standing double-sided light box. It holds a backlit graphic and a clear anti-glare front sheet in place on either side, utilising an easy change front loading snap frame system.

The Apache Totem is internally illuminated with opal acrylic panels on both sides which diffuse the light evenly across the graphic area; these panels are fitted into the vertical profiles in a curved format for a panoramic perspective. The upright aluminium profiles and the top plate are made from anodised aluminium and the weighted base is fabricated from steel which ensures the totem is very stable. The top and base are laser cut and the upright profiles are cut by a precision saw for the ultimate quality finish. The unit uses TL daylight fluorescent tubes, which can be changed easily without the need for special tools, and conforms to CE electrical standards.

The Apache Illuminated Totem display is a versatile display which is both aesthetically pleasing and extremely effective.

APACHE

- Modern curved design
- Indoor use
- Easy open snap frame to change posters
- Freestanding
