## FLEX FACE

- Large seamless displays
- PVC printed skin
- Single or double sided
- Outdoor use
- Long life, high quality

The outdoor Flex Face light box sign system is ideal for larger outdoor illuminated sign applications such as illuminated advertising, company signs and shop front signs. Flex Face light boxes are very robust and durable with a 200mm deep aluminium profile as standard with internal supporting struts fixed to the back panel to create the rear tray of the light box. The internal illumination of the light box can be produced using traditional fluorescent tubes or energy saving LEDs.

The Flex Face light box is so called because it features a flexible PVC banner fascia which is stretched across the front of light box to create what is essentially like a skin on a drum. The PVC banner skin is specifically manufactured for backlit applications to allow for the light to pass through and illuminate the banner graphic from edge to edge, although a flex frame can be added to the face of the light box if required.

Flex Face signs can be formed to non-rectangular shapes including circular illuminated signs and even large illuminated letters to create completely bespoke illuminated signs.
